

# Pennies, Salt, & Vinegar

## What to do:

1. Use a dull, dirty penny for this investigation.
2. Observe the physical properties of the penny. Record these observations.
3. Put the penny on the bottom of a Petri dish.
4. Sprinkle salt over the top of the penny.
5. Use a dropper to cover the penny with vinegar.
6. Observe any changes in the penny.
7. Record your observations on your answer sheet.
