## Physics Station Instruction Sheet

There are 12 stations around the classroom.

Each station is labeled with a sign and has a basket.

The baskets contain 1 – 3 task cards and any equipment necessary for that station.

You must work with your group – you will move through the stations together.

Only one group may be at a station at a time.

You may do the stations in any order. Some stations require information from other stations. If you are unsure of vocabulary or concepts, check the rest of your answer sheet. All of the information you need is in the background information for each station.

You do not have time to visit with your group. Work seriously and responsibly through the stations. If you reach a point where you cannot get to another station because they are all in use, then work on the textbook section.

The stations you will rotate through are:

	Friction		Inclined Planes
	Speed & Velocity		Other Simple Machines - PowerPoint
	Work		Mechanical Advantage
	Acceleration		Skateboard Science
	Force		Potential & Kinetic Energy
	Newton's Laws		Textbook

Check off each station as you complete it.

Check off each station as you complete it.
