

1. Read the Seneca legend "Spring Defeats Winter". Discuss the story with your table group. How does the legend help explain the changes in the seasons?
2. Answer the questions that are listed after the story. Discuss them with your table partners. They will help you think about different ideas associated with seasons.
3. Write your own myth / legend / short story about the seasons. You may focus on the changes in the sky, the objects in the sky, in weather, in plants and animals, or in people.
4. Use as many creative or imaginary characters or situations as you like, but **the science must be accurate.**
