

Name _____

Observation

Background Information: Observation is the most important skill of a scientist. It is the skill of describing scientific events. Observations can be made with all 5 senses; but **safety** must be taken into consideration. It is not always safe to use every sense when making observations.

Procedure:

1. Observe the two beakers at the front of the room.
2. Draw what you see.
3. Continue observing the beakers and record your observations in bullet form.
